                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
     The present sequence encodes mouse Esel. The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex with Espl5 protein), vesicular trafficking and actin cytoskeleton.
                                                                                                                                                                                                                                                                                                                                                                                                   Egan

```
CC Generally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I) specific antibodies (Ab); sequences antisense to the (I) CC polynucleotide; agents that downregulate expression of Ese genes or CC antagonists of an Ese binding partner are used to treat diseases CC associated with undesirable endocytosis and resulting changes in cellular CC function. Particularly overexpression of Esel is used to block CC clathrin-mediated endocytosis in vivo or in cell cultures, while CC administration of (I) is used to promote endocytosis of selected cells. CC (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of CC cells that can be stimulated to poliferate by a growth factor receptor; CC and similar compounds (also inactive Ese mutants) can be used to prevent CC complex. Generally conditions that can be regulated, in vivo or in cell CC cultures, by forming an Ese-Espl5 complex, then binding dynamin to the CC complex. Generally conditions that can be treated include cancer; CC abnormal cell division or migration; viral infection; or abnormal CC receptor signalling, tissue development or synaptic transmission.

CC involving the megakaryocytic lineage. The SH3DIA gene maps to the command candidate region for low platelets on chromosome 21.

Sequencing of 5 different sizes of cDNA clone from foetal brain CC (see ARZ34570-74) suggests that at least 3 isoforms exist. The CC invention provides methods for the diagnosis and treatment of CC megakaryocytic abnormality, myeloproliferative disorder, platelet disorder on chromosome 21. low platelets in deletion for CC platelet disorder on chromosome 21. low platelets in deletion for CC platelet disorder on chromosome 21 with leukaemias, neural CC platelet disorder on chromosome 21 with leukaemias, neural CC platelet in deletion for CC platelet constitue and corresponding cognitive dysfunctions, comic cocphaly, lissencephaly, and colpocephaly. Methods are also CC provided for: suppressing cells unable to regulate themselves; CC screening for a somatic alteration in the SH3DIA gene; monitoring CC the progress and adequacy of a treatment; monitoring tunour risk CC progress or megakaryoctyic abnormality, myeloproliferative disorder, comegakaryoctyic abnormality, myeloproliferative disorder, comegakaryoctic abnormality, myeloproliferative disorder, comegakaryoctic abnormality myeloproliferative disorder, comegakaryoctic abnormality myeloproliferative disorder, comegakaryocytic abnormality myeloproliferative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This is the nucleotide sequence of full-length cDNA (clone 11) corresponding to a novel human SH3 gene, termed the SH3DIA gene, that contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The SH3DIA gene maps to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
CC involving the megakaryocytic lineage. The SHIDIA gene maps to the CC small candidate region for low platelets on chromosome 21.

CS sequencing of 5 different sizes of cDNA clone from foetal brain CC (see AR234570-74) suggests that at least 3 isoforms exist. The CC invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet CC disorder, acute leukaemia, neural disorders, thromobocytopenia, CC platelet disorder on chromosome 21, low platelets in deletion for CC 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain CC malformations and corresponding cognitive dysfunctions, CC microcephaly, lissencephaly, and colpocephaly. Methods are also CC provided for: suppressing cells unable to regulate themselves; CC recening for a somatic alteration in the SH3DIA gene; monitoring the progress and adequacy of a treatment; monitoring tumour risk progress or megakaryoctyic abnormality, myeloproliferative disorder, CC haematopoietic disorder, platelet disorder or leukaemia; and treatment of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, leukaemia or neural disorder using a control of the contr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SH3D1A gene; human; Down's syndrome; leukaemia; cancer; megakaryocytic abhormality; myeloproliferative disorder; platelet disorder; neural disorder; thromobocytopenia; haematopoietic disorder; cognitive dysfunction; microcephaly; lissencephaly; colpocephaly; holoprosencephaly; diagnosis; therapy;

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC trestore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC diagnostic coding sequences of data and products dependent on DNA and CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                          á
                                                                                                                                                                                                                                                                                        at least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, platelet disorder on chromosome 21; low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3D1A gene; monitoring the progress and adequacy of a treatment; monitoring tumour risk progress or megakaryocryic abnormality, myeloproliferative disorder, having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder or leukaemia; and treatment of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, leukaemia or neural disorder using a platelet disorder.
                                                                                                                                                                            Query Match

The invention describes an isolated nucleic acid molecule (I) encoding a convel central nervous system protein. (I) and polypeptides (III) encoded (I) are used to treat a medical conditions and in diagnosis of a combination. Disorders which are diagnosed or treated include actionismume diseases e.g. rheumatoid arthritis, hyperproliferative (I) disorders e.g. neoplasms of the breast or liver, cardiovascular disorders (I) cardiac arrest, cerebrovascular disorders e.g. cardiovascular disorders (I) angiogenesis, nervous system disorders e.g. Alzheimer's disease and (I) amylotrophic lateral sclerosis, infections caused by bacteria, viruses (I) angiogenesis, nervous system disorders e.g. Alzheimer's disease and (I) administration and infection, gastrointestinal disorders e.g. dysphagia, (I) adenocarcinomas and irritable bowel syndrome, reproductive system (I) adenocarcinomas and irritable bowel syndrome, reproductive system (I) adenocarcinomas and irritable bowel syndrome, reproductive system (I) activated infection, gastrointestinal disorders e.g. disbetes (I) and pituitary dwarfism, cancers and disorders at the cellular level e.g. (I) activated infection. The polypeptides can also be used to aid wound healing and (I) infarction. The polypeptides can also be used to aid wound healing and (I) infarction. The polypeptides can also be used to aid wound healing and (I) infarction organs before transplantation, for supporting cell culture of (I) concrease or decrease storage capabilities, fat content, lipid, protein, (I) increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       17-NOV-2000;

CC The invention relates to human polynucleotides (AAI63803-AAI64012) and CC the encoded proteins (AAM43497-AAM4366) useful for preventing, treating CC or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the CC specification. The nucleic acids, proteins, antibodies and (ant)agonists CC are useful in the diagnosis, treatment and prevention of: (a) cancer, CC e.g. breast and ovarian cancer and other cancers of the adramal gland, CC come, bone marrow, breast, gastrointestinal tract, liver, lung, or CC urogenital; (b) immune disorders e.g. Addison's disease, allergies, CC autoimmune hammolytic anaemia, autoimmune thyroiditis, diabetes mellitus, CC crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC colitis; (c) cardiovascular disorders such as myocardial ischaemias; CC (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal CC and parasitic infectious diseases such as viral, bacterial, fungal CC core.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

CC involving the megakaryocytic lineage. The SH3DIA gene maps to the CC small candidate region for low platelets on chromosome 21. Sequencing of 5 different sizes of cDNA clone from footal brain CC (see AAZ34570-74) suggests that at least 3 isoforms exist. The CI invention provides methods for the diagnosis and treatment of CC megakaryocytic abnormality, myeloproliferative disorder, platelet CC disorder, acute leukaemia, neural disorders, thromobocytopenia, myeloproliferative disorder, platelet CC platelet disorder on chromosome 21. low platelets in deletion for CC 21, association of gains in chromosome 21 with leukaemias, neural cabnormalities, dysfunctions and disorders including brain cabnormalities, dysfunctions and disorders including brain conference of suppressing cells unable to regulate themselves; conference of a somatic alteration in the SH3DIA gene; monitoring the progress or megakaryocytic abnormality, myeloproliferative disorder, consequence of a subject (including a prenatal subject) having megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, leukaemia or neural disorder using a concleic acid that expresses SH3DIA or its antisense nucleic acid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating
                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of mutauresponsible for genetic disorders or other traits and to asse

and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WI at ftp.wipo.int/pub/published_pct_sequences. disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity from WIF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the specification. The primers ests can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2131 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Local Similarity
                                                                                                                                                                                                                                                                                                                                                                  692

gene, that contributes to the development of platelets and the SH3DIA corresponding to a novel human SH3 gene, termed the SH3DIA gene, that contributes to the development of platelets and the pathogenesis of luwaemias, both in general and in particular those involving the megakaryocytic lineage. The SH3DIA gene maps to the small candidate region for low platelets on chromosome 21.

Sequencing of 5 different sizes of cDNA clone from footal brain (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, platelet disorder on chromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DIA gene; monitoring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                megakaryocytic abnormality, myeloproliferative disorder; platelet disorder; neural disorder; thrombocytopenia; haematopoietic disorder; cognitive dysfunction; microcephaly; lissencephaly; colpocephaly; holoprosencephaly; diagnosis; th
